

01> What is Virtualization?

In technology that lets you create useful IT services using resources that are traditionally bound to hardware. It allows you to use a physical machine's full capacity by distributing its capabilities among many users.

In computing, virtualization or virtualisation is the act of creating a virtual version of something, including virtual computer hardware platforms, storage devices, and computer network resources.

02> VMware: VMware, which specializes in server, desktop, network, and storage virtualization. Citrix which has a niche in app.

VMware Server Virtualization, a hypervisor is installed on the physical server to allow for multiple virtual machines (VMs) to run on the same physical server.

03> VMware on windows 10 (Lenovo G50-80)
